

PRESS RELEASE

## **FAE TECHNOLOGY GROUP: KAYSER SPACE EMERGES**

*About one hundred days after joining the Group, the renowned Kayser Italia evolves into Kayser Space, strengthening its position in the New Space Economy and more clearly delineating its strategic focus: the design and building of space application technologies and systems and the development of microgravity services.*

*New visual identity created as part of the rebranding.*

Gazzaniga (BG) - Livorno, April 14, 2026 - About one hundred days after joining the FAE Technology Group, **Kayser Italia evolves into Kayser Space**, marking a strategic and industrial transition that opens a new phase of development within the New Space Economy and as announced by FAE Technology S.p.A. - Benefit Company ("**FAE Technology**" or the "**Company**"), tech company and parent of the Italian advanced electronics and space technology solutions sector Group of the same name (the "**Group**").

The emergence of Kayser Space, accompanied by a new visual identity, is a turning point in the journey of the Livorno-based company, breaking from a predominantly Italy-based focus and reflecting its geographical and market expansion within the wider growth of the Group as a whole. The model has two complementary strands: the design and building of space application technologies and systems on the one hand, and on the other the development of microgravity services, which have evolved into an end-to-end offering that seeks to make research and development activities accessible to private operators, as well as space agencies. Taken together, these competencies constitute an integrated approach to turning scientific concepts into operational systems, accompanying missions throughout the entire development cycle, from initial design to in-orbit execution.

The update makes the offer of Kayser Space - which brings together the activities currently carried out by Kayser Italia and its British subsidiary Kayser Space Ltd. - clearer and more recognizable, and complements its established positioning in the institutional mission arena with a growing commitment to the New Space Economy, with the goal of extending its reach into the commercial space market. The transition from the use of the word "Italia" reflects this shift from an Italian-focused enterprise to one with an international outlook and belonging to an integrated Group operating on global markets.

The integration with the FAE Technology Group, together with the investments made and planned, is a key supporting factor. The complementarity of advanced electronics design expertise, industrialization capabilities, and solution development for high-complexity environments strengthens Kayser Space's role throughout the entire value chain, fostering a more scalable and market-oriented model.

**Gianmarco Lanza**, Chairperson of Kayser Space, and Chairperson and Chief Executive Officer of FAE Technology, stated: *"Kayser Space combines over 40 years of space experience - with more than 100 completed missions - with the industrial capacity of the FAE Technology Group. This integration enables us to address a new phase of development in the many opportunities offered by the New Space Economy, through an increasingly integrated and market-oriented model. The restyling of the brand reflects this path, bringing consistency to the presentation of our technological content, while serving the need to communicate in an increasingly direct and effective way."*

This evolution is reflected in the activities of Kayser Space, which is engaged in the design and development of technologies and systems for space applications, focusing on the end-to-end development of experiments, from initial concept to in-orbit execution. In these areas, long-standing collaborations with scientists and astronauts enable Kayser Space to develop proprietary experimental technologies that support advanced research and the transfer of innovation to terrestrial applications in the fields of health, industry and everyday life. Alongside this component, Kayser Space also offers microgravity research services, based on a structured approach that spans the entire operational chain, covering all phases of the experiment: from feasibility assessment and mission definition to hardware development, safety certifications, launch preparation and in-orbit operations. A multidisciplinary team of scientists and engineers ensures coordination between the technical, operational and regulatory requirements.

The path aligns with the current communication codes of the aerospace industry, which is increasingly market-focused. In this sense, the rebranding does not introduce new scopes of activity, but evolves the way they are presented: Kayser Space leverages more than 40 years of engagement in the sector and more than a hundred completed missions, and relies on a distinctive wealth of expertise on which to build the next phase of growth, within the context of a growing presence of private operators working on in-orbit infrastructure and new industrial and scientific applications. All this is consistent with the FAE Technology Group's approach, which seeks to integrate technological content and the ability to communicate it effectively and recognizably.

The new visual identity has been built on the principles of consistency and exactness, translating the distinctive elements of the space sector, such as the continuity of forms and the absence of edges, into a language capable of expressing precision, control and direction. The result is a system designed to ensure recognizability and consistency across all applications. The work is developed in continuity with the identity of the FAE Technology Group, also visually reinforcing the path of integration and consistency between the Group's various entities.

\*\*\*\*

FAE Technology S.p.A. - Benefit Company is the Tech company leading the Italian Group of the same name, listed on the Euronext Growth Milan market of the Italian Stock Exchange, and is an advanced electronics and space technology solutions leader. Through the Electronics Division, the Group operates as an Original Design Manufacturer (ODM) and comprises several highly-specialized companies: FAE Technology, Elettronica GF, IpTronix and MAS Elettronica. The Space division operates through Kayser Space, providing technology and support for space exploration and in-orbit activities. Together, the various entities form a technology platform that covers the entire life cycle of a solution: from R&D to co-design, from material supply to prototyping and production and from advanced testing to after-sales support. Founded in 1990 in Gazzaniga (BG) by Francesco Lanza, who began by producing a small series of electronic boards, FAE Technology has been led since 2008 by his son Gianmarco Lanza, current Chairperson and Chief Executive Officer. FAE Technology is known for its focus on innovation - promoting open innovation and shared research at the "Kilometro Rosso" hub - and on sustainability and corporate social responsibility, becoming a Benefit Company on May 13, 2022. FAE Technology benefits from memberships with renowned universities and research centers, including the "Senseable City Lab" at the MIT (Massachusetts Institute of Technology) in Boston, in addition to strategic partnerships with major sector players. The Group's ability to tap into both organic and acquisition-led growth opportunities, including through supply chain and market consolidation, strengthens its role as a strategic technology development partner to companies and organizations. The Group reports a consolidated value of production of Euro 75.5 million for 2024, up 18.2% on 2023.
