Zignago Vetro enters the Intermonte Valore Italia Index

Fossalta di Portogruaro, 2 July 2026. Zignago Vetro is pleased to announce its entry into the **Intermonte Valore Italia Index**. The basket is made up of the 100 best small and medium-sized companies listed on the Italian Stock Exchange that have a capitalization of less than one billion euros and do not belong to the FTSE MIB.

The index was created to highlight the excellence of the Italian productive fabric, creating a direct channel between entrepreneurship, the capital market and the national economic context. For national and international investors, it represents an important diversification solution compared to traditional stock market indices and which highlights the quality and know-how typical of the real economy of our country.

The selection is based on strict technical and financial criteria used by the promoters in order to ensure adequate levels of liquidity, transparency and investability. In fact, crucial elements such as minimum free float, governance soundness, debt sustainability and constant coverage by financial analysts were analyzed.

The launch of the index represents a decisive step in Banca Generali's innovative strategic project presented on 1 July 2026 at Palazzo Mezzanotte of the Italian Stock Exchange. The initiative was created precisely to respond to the historical lack of liquidity that often penalizes listed SMEs, supporting them in a growth path and making them more visible and attractive to large capital. The project combines the strength of Banca Generali and the specific skills of Intermonte, an integral part of the Group since 2025, which represents a historic point of reference for financial research and investment banking on SMEs.

Starting from this index, Banca Generali, in collaboration with Investlinx and Intermonte, has launched a new actively managed ETF with PIR *compliant*. The instrument will invest directly in the companies in the index, including Zignago Vetro. Banca Generali will support the fund with an initial investment of €100 million but aiming to gradually increase its exposure to €500 million in the medium term. According to estimates, this transaction will generate constant flows on the market of around 1-2 million euros per day, a capital injection that is equivalent to more than 5% of the total free float of the index.
