

PRESS RELEASE

SOMEC: SUBSIDIARY FABBRICA SECURES RECORD CONTRACT FOR 350 PARK AVENUE IN NEW YORK

The contract involves the installation of over 83,600 square metres of curtain walling for 350 Park Avenue, the new office tower designed by Foster + Partners in the heart of Manhattan.

Marchetto (Chairman of Somec Group) stated: *'With this prestigious project, the Group's backlog now exceeds one billion euros.'*

San Vendemiano (Treviso), September 8, 2026 – Somec S.p.A. (Euronext Milan: SOM), specialising in the engineering, manufacturing, and installation of complex turnkey projects for the civil and naval sectors, announces that its US subsidiary Fabbrica LLC, part of the Horizons division, has secured a contract for 350 Park Avenue, the new office tower being developed by Vornado Realty Trust in the heart of Midtown Manhattan, New York.

The prestigious contract awarded to Fabbrica covers the manufacturing and installation of the building's curtain walling, spanning a total surface area of over 83,600 square metres.

Founded by Alberto De Gobbi and Claudio Daniele in 2016, Fabbrica is the Somec Group's US subsidiary specialising in the design and delivery of bespoke, high-tech, and high-design engineered building façade systems, developed for leading architecture firms across New York and New England. From the engineering of individual components to the mechanics of parts, the focus is on creating distinctive envelopes capable of ensuring building performance, insulation, and safety. The Group's flagship subsidiary joined Somec in 2018 and currently operates from its headquarters and manufacturing facilities in Windsor, Connecticut, alongside an operations office in New York and dedicated design and production sites in Canada and Italy.

Designed by the international firm Foster + Partners, 350 Park Avenue will be one of the most iconic buildings in New York's new skyline. Standing at approximately 448 metres tall across 62 storeys, plus four technical levels at the summit, it will also become one of the city's tallest skyscrapers. Spanning a floor area of approximately 176,500 square metres, the building is set to accommodate over 6,000 workers.

The project features a stepped architectural configuration with full-height glazing and landscaped terraces. Designed in accordance with advanced sustainability criteria, the tower will feature a high-performance envelope engineered to support energy efficiency, well-being, and workplace quality. The glazing will maximise natural light intake, while the curved façade elements will expand outward views across the city, enabling the building envelope to play a key role in conveying the building's architectural identity.

The tower will rise in the heart of one of Manhattan's most prestigious architectural contexts, in dialogue with iconic examples of Modernism, Art Deco, and historic New York architecture, including the Seagram Building, Lever House, the Waldorf Astoria, and St. Bartholomew's Church.

The award of this contract represents a major new milestone in Fabbrica's growth path in the United States. Indeed, building on a track record of premier projects delivered in recent years across the New York area and main cities on the US East Coast, this contract consolidates the company's position as a leading player in the execution of architectural envelopes for high-value and prestigious structures.

The execution of the contract in its entirety and its financial impact are expected to span a period from 2026 to 2032.

Oscar Marchetto, Chairman of Somec Group, commented: *'The award of this contract represents a key milestone for Fabbrica and brings pride to the entire Somec Group. Being selected to contribute to a development destined to make a distinctive mark on New York's skyline bears witness to the quality of our expertise, our proven reliability in executing high-profile projects, and the solid track record we have established in the United States. The scale and timeframe of this contract further enhance the Group's visibility, propelling us into a new phase of growth in which we intend to continue combining engineering excellence, operational execution, and long-term value creation, while opening up new horizons across the States. This contract, along with others secured over the past eight months, brings our current order backlog to over one billion euros.'*

Alberto De Gobbi, Chairman of Fabbrica, added: *'350 Park Avenue features exceptional technical and structural specifications. Producing and installing over 83,600 square metres of curtain walling for a tower of this height is the type of project that Fabbrica's wealth of experience and organisational capacity come to the fore. This success rewards the work carried out by our team and confirms the market's confidence in our ability to undertake highly challenging programmes, while guaranteeing quality, precision, and adherence to time schedules.'*

350 Park Avenue brings together some of the world's leading organisations in their respective fields of expertise. The project team also includes AECOM Tishman as construction manager and Banker Steel for structural steel fabrication.
