PRESS RELEASE

SOMEC: SOMEC SECURES ORDERS WORTH OVER 119 MILLION EURO FOR A NEW GENERATION OF CRUISE SHIPS

Somec Navale takes centre stage, supplying glazing systems and energy-efficient, high-performance architectural solutions for new ships with an entirely new silhouette

San Vendemiano (Treviso), 20 October 2026 - Somec S.p.A. (Euronext Milan: SOM), specialised in the design, production and installation of complex turnkey projects across the civil and naval sectors, announces that it has been awarded contracts worth a total of over 119 million Euro in the naval glazing sector, covering the supply of glazing systems and architectural components for a new series of cruise ships being built at a leading French shipyard.

The agreement, which falls under the *Horizons - Engineered Systems for Naval Architecture and Building Façades* Division, covers two vessels, with options for further units. Supply and installation will take place over several years, with deliveries and the related financial benefits expected between 2028 and 2040.

The contracts are part of a new-generation programme centred on the evolution of naval architecture and the quality of the onboard experience. With their entirely new silhouette, the vessels - destined for one of the world's leading cruise lines - will require solutions that combine design freedom, visual continuity between indoor and outdoor spaces, safety and energy efficiency. Somec will help shape the ships' architectural envelope with an integrated package of glazing systems and balcony components, designed to meet the technical and aesthetic requirements of the new series.
The orders also include the supply of AVSW (Automatic Vertical Sliding Windows) systems: an automated solution that allows the glazed surfaces to be opened to varying degrees, creating seamless continuity between indoor and outdoor spaces and bringing passengers closer to the sea. These systems support a more versatile, contemporary approach to onboard spaces, where technology and design come together to enhance the passenger experience.

Oscar Marchetto, Somec Chairman, commented: *"The ships of the future take shape where bold design vision meets highly specialised industrial expertise. With these orders, we are bringing our know-how to the heart of a new international programme, turning technological innovation, efficiency and design into tangible solutions for onboard architecture. Our sector continues to enjoy solid demand and long-term growth prospects - an industrial horizon that, thanks in part to this contract, now stretches to the end of the next decade."*

These contracts also reflect the strength of a European shipbuilding industry that, as a recent study has highlighted[1], continues to excel in the most complex programmes in terms of design and technology. Against this backdrop, Somec continues to strengthen the competitiveness of the supply chain, drawing on industrial and specialist expertise developed in Italy and recognised worldwide.
